## **DETAILED ACTION**

### ***Claim Rejections - 35 USC § 103***

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ruthardt et al. in view of Ratti.

Ruthardt et al. discloses an annular seal member 9 sealing high-pressure fuel within a pressure-introducing chamber 3 may not escape onto a low-pressure side 6 through a gap 18 that is defined between an injector housing 2 and a valve body 7 having a valve piston 26 slidably inserted therein, and which is disposed in the pressure-introducing chamber. Ruthardt et al. seal does not have a backup ring with a plurality of pawls. However, Rati teaches a seal member 10 with backup ring 11 that has a plurality of pawls 24 that fixed to the seal member as shown in figure 3. Therefore, it would have been obvious to one having ordinary skill in the art to have provided the device of Ruthardt et al. with a backup ring as suggested by Rati. Doing so would provide a way to maintain good fluid tight relationship (see column 1, lines 65-66).

### ***Conclusion***

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The following patents are cited to show the art with respect to a seal member with backup ring: Domyan et al., Porel, and Davis et al.
